

Creating a Light with a photometric web using an ies file

Select:

Create tab>Lights

Choose Target Light and select yes when prompted to adjust exposure controls

In the General Parameters box under Light Distribution (Type) select Photometric Web

Expand the Distribution(Photometric Web)box that should be under General Parameters

Select < Choose Photometric File >

Open ies file saved in another drive

Click on the plane in 3ds and drag the target box for the opened ies file

The target box and ies file location can be adjusted
